12	Contact	34

**CHAPTER
ONE**

INTRODUCTION

This document is a manual for the Fermi surface drawing program “FermiSurfer”. FermiSurfer has been developed since 2012 by Mitsuaki Kawamura (ISSP, The University of Tokyo); it is opened on web at November, 2014. It draws Fermi surfaces, and plot k -depend matrix elements such as the superconducting gap and orbital character with colors.

**CHAPTER
TWO**

DIRECTORIES AND IMPORTANT FILES

- **doc/**
[Directory for manuals]
 - doc/index.html : Index page
- **examples/** : Directory for samples
- **src/** : Directory for source code
- **configure** : Configuration script for build

INSTALL

3.1 Installation in Linux and macOS

1. Install the required package

- For Debian/Ubuntu

```
$ sudo aptitude install libwxgtk3.0-dev
```

- For Red Hat Enterprise Linux/CentOS

```
$ sudo yum install wxGTK3-devel.x86_64
```

- macOS (Homebrew)

```
$ brew install wxmac
```

- macOS (Mac Ports)

```
$ port install wxWidgets-3.0
```

2. Install

```
$ ./configure  
$ make  
$ sudo make install
```

Then a binary file `src/fermisurfer` is generated and copied into `/usr/local/bin/`.

3.2 Installation in Windows

Download the binary file.

Alternatively, we can build FermiSurfer by ourselves after we install wxWidgets library. We can use `fermisurfer.vcxproj` together with VisualStudio.

CHAPTER
FOUR

INPUT FILE

4.1 input-file format

You have to prepare following data:

- The number of k grid (three direction)
- Reciprocal lattice vectors
- The number of bands
- The orbital energy at each band and k (We call it “energy”).
- Variables that you want to plot with color (We call it “matrix elements”).

The input file is as follows (`mgb2_vfz.fs`):

```
40          40          36          (1)
0                      (2)
3                      (3)
1.0000000      0.57735026      -0.0000000 (4)
0.0000000      1.1547005       0.0000000 (5)
0.0000000      -0.0000000      0.87206507 (6)
2.91340202E-02                           (7)
2.93242838E-02
2.98905596E-02
3.08193434E-02
:
:
0.14393796
0.12800488
0.0000000          (8)
0.36269817
0.71675694
1.0535113
1.3644149
:
:
-26.409407
-19.318560
-10.315671
```

1. The number of k in each direction

2. Switch to specify type of k grid (Choose from 0, 1, 2)

k grid is represented as follows:

$$\mathbf{k}_{i,j,k} = x_i \mathbf{b}_1 + y_j \mathbf{b}_2 + z_k \mathbf{b}_3, \quad (4.1)$$

where $i, j, k = 1 \dots N_1, 1 \dots N_2, 1 \dots N_3$, and N_1, N_2, N_3 are the number of k in each direction.

x_i, y_j, z_k can be chosen from below:

- 0 (Monkhorst-Pack grid) : $x_i = \frac{2i-1-N_1}{2N_1}$
- 1 : $x_i = \frac{i-1}{N_1}$
- 2 : $x_i = \frac{2i-1}{2N_1}$

3. The number of bands

4. Reciprocal lattice vector 1 (arbitrary unit)

5. Reciprocal lattice vector 2

6. Reciprocal lattice vector 3

7. Energy (The order of component is written in [How to produce the input file in C and fortran programs](#))

`fermisurfer` assume that the Fermi energy is 0.0 in the default. You can shift the Fermi energy by using Shift Fermi Energy menu described at the section 6.5.

8. Matrix elements (The order of component is written in [How to produce the input file in C and fortran programs](#))

Same as the energy, but in this case we can write 0 to 3 blocks for this quantity, i.e. we can omit to write this.

4.2 BXSF format

The BXSF format also can be treated by FermiSurfer. In this case this program behaves as “Matrix elements” are omitted.

4.3 How to produce the input file in C and fortran programs

fortran

```
real(4) :: bvec1(3), bvec2(3), bvec3(3) ! Recipocal lattice vector
integer :: nk1, nk2, nk3 ! k-grid of each direction
integer :: ishift ! 1 for shifted grid, 0 for unshifted grid.
integer :: nbnd ! The number of bands
real(4) :: eig(nk3,nk2,nk1,nbnd) ! energy
real(4) :: x(nk3,nk2,nk1,nbnd) ! matrix element

integer :: ik1, ik2, ik3, ibnd, fo

open(fo, file = "sample.fs")
write(fo,*) nk1, nk2, nk3
write(fo,*) ishift
write(fo,*) nbnd
```

(continues on next page)

(continued from previous page)

```

write(fo,*)
real(bvec1(1:3))
real(bvec2(1:3))
real(bvec3(1:3))
do ibnd = 1, nbnd
  do ik1 = 1, nk1
    do ik2 = 1, nk2
      do ik3 = 1, nk3
        write(fo,*) real(eig(ik3,ik2,ik1,ibnd))
      end do
    end do
  end do
do ibnd = 1, nbnd
  do ik1 = 1, nk1
    do ik2 = 1, nk2
      do ik3 = 1, nk3
        write(fo,*) real(x(ik3,ik2,ik1,ibnd))
      end do
    end do
  end do
end do
close(fo)

```

C

```

float bvec1[3], bvec2[3], bvec3[3]; /*Resiplocal lattice vector*/
int nk1, nk2, nk3; /*k-grid of each direction*/
int ishift; /*1 for shifted grid, 0 for unshifted grid.*/
int nbnd; /*The number of bands*/
float eig[nbnd][nk1][nk2][nk3]; /*Energy*/
float x[nbnd][nk1][nk2][nk3]; /*Matrix element*/

FILE* fo;
int ibnd, ik1, ik2, ik3;

fo = fopen("sample.frmsf", "w");
ierr = fprintf(fo, "%d %d %d\n", nk1, nk2, nk3);
ierr = fprintf(fo, "%d\n", iswitch);
ierr = fprintf(fo, "%d\n", nbnd);
ierr = fprintf(fo, "%e %e %e\n", bvec1[0], bvec1[1], bvec1[2]);
ierr = fprintf(fo, "%e %e %e\n", bvec2[0], bvec2[1], bvec2[2]);
ierr = fprintf(fo, "%e %e %e\n", bvec3[0], bvec3[1], bvec3[2]);
for (ibnd = 0; ibnd < nbnd; ++ibnd) {
  for (ik1 = 0; ik1 < nk1; ++ik1) {
    for (ik2 = 0; ik2 < nk2; ++ik2) {
      for (ik3 = 0; ik3 < nk3; ++ik3) {
        ierr = fprintf(fo, "%e\n", eig[ibnd][ik1][ik2][ik3]);
      }
    }
  }
}
for (ibnd = 0; ibnd < nbnd; ++ibnd) {

```

(continues on next page)

(continued from previous page)

```

for (ik1 = 0; ik1 < nk1; ++ik1) {
    for (ik2 = 0; ik2 < nk2; ++ik2) {
        for (ik3 = 0; ik3 < nk3; ++ik3) {
            ierr = fprintf(fo, "%e\n", x[ibnd][ik1][ik2][ik3]);
        }
    }
}
fclose(fo);

```

4.4 For the 2D color plot (See `srvo3_t2g.frmsf` in examples)

fortran

```

real(4) :: bvec1(3), bvec2(3), bvec3(3) !Reciprocal lattice vector
INTEGER :: nk1, nk2, nk3 !k-grid of each direction
integer :: ishift !1 for shifted grid, 0 for unshifted grid.
integer :: nbnd !The number of bands
real(4) :: eig(nk3,nk2,nk1,nbnd) !energy
real(4) :: x(nk3,nk2,nk1,nbnd,2) !matrix element (2D or complex)

integer :: ik1, ik2, ik3, ibnd, fo, ii

open(fo, file = "sample.frmsf")
write(fo,*) nk1, nk2, nk3
write(fo,*) ishift
write(fo,*) nbnd
write(fo,*) real(bvec1(1:3))
write(fo,*) real(bvec2(1:3))
write(fo,*) real(bvec3(1:3))
do ibnd = 1, nbnd
    do ik1 = 1, nk1
        do ik2 = 1, nk2
            do ik3 = 1, nk3
                write(fo,*) real(eig(ik3,ik2,ik1,ibnd))
            end do
        end do
    end do
end do
do ii = 1, 2
    do ibnd = 1, nbnd
        do ik1 = 1, nk1
            do ik2 = 1, nk2
                do ik3 = 1, nk3
                    write(fo,*) real(x(ik3,ik2,ik1,ibnd,ii))
                end do
            end do
        end do
    end do
end do
close(fo)

```

4.5 Omit the quantity for the color plot

fortran

```
real(4) :: bvec1(3), bvec2(3), bvec3(3) ! Resiplocal lattice vector
INTEGER :: nk1, nk2, nk3 ! k-grid of each direction
integer :: ishift ! 1 for shifted grid, 0 for unshifted grid.
integer :: nbnd ! The number of bands
real(4) :: eig(nk3,nk2,nk1,nbnd) ! energy

integer :: ik1, ik2, ik3, ibnd, fo, ii

open(fo, file = "sample.frmsf")
write(fo,*) nk1, nk2, nk3
write(fo,*) ishift
write(fo,*) nbnd
write(fo,*) real(bvec1(1:3))
write(fo,*) real(bvec2(1:3))
write(fo,*) real(bvec3(1:3))
do ibnd = 1, nbnd
    do ik1 = 1, nk1
        do ik2 = 1, nk2
            do ik3 = 1, nk3
                write(fo,*) real(eig(ik3,ik2,ik1,ibnd))
            end do
        end do
    end do
end do
end do
```

CONTROL FERMISURFER

5.1 Launch

5.1.1 For Linux, Unix, Mac

You can launch generated executable as follows:

```
$ fermisurfer mgb2_vfz.fs
```

You need a space between the command and input-file name. (The sample input file `mgb2_vfz.fs` contains z element of the Fermi velocity in MgB₂.)

5.1.2 For Windows

Click mouse right button on the input file. Choose “Open With ...” menu, then choose `fermisurfer.exe`.

Then, Operations are printed, and Fermi surfaces are drawn (Fig. 1).

The following operations are available:

- Rotation of objects with mouse drag
- Expand and shrink with mouse wheel
- Window re-sizing
- Moving objects with cursor keys (wasd for Windows)
- Operate by using the panel

Here, I will explain all menus.

Note: Some operations are not applied immediately, and after the “Update” button is pushed they are applied. Such operations are referred as “Update required”.

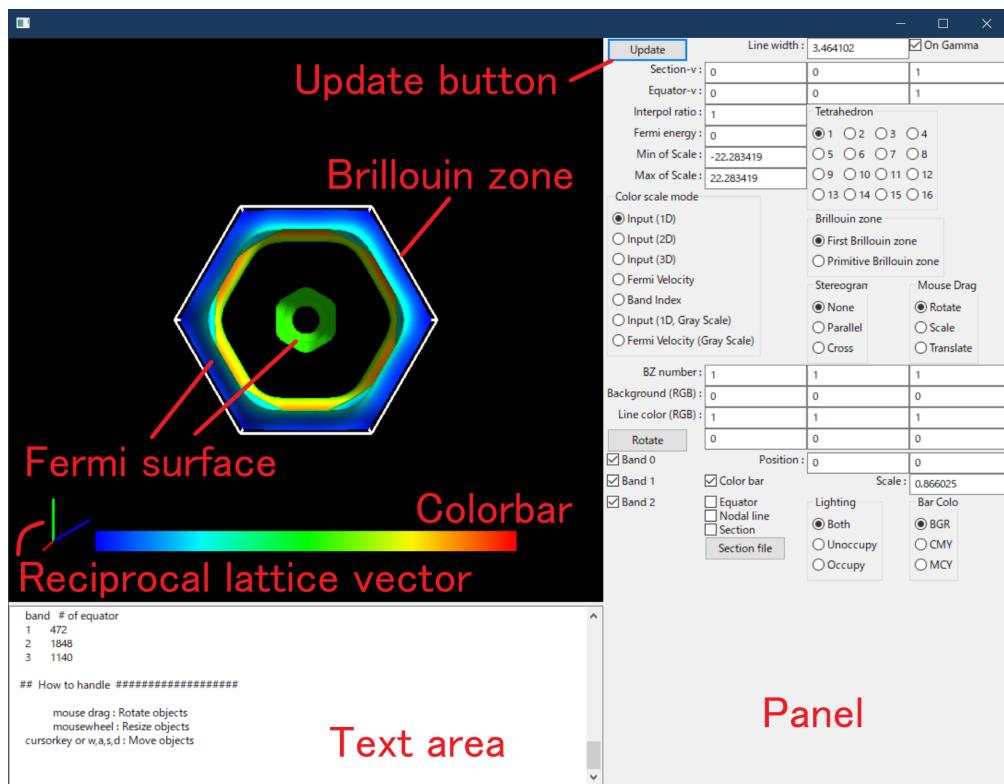

Fig. 1: Main view.

5.2 Background color

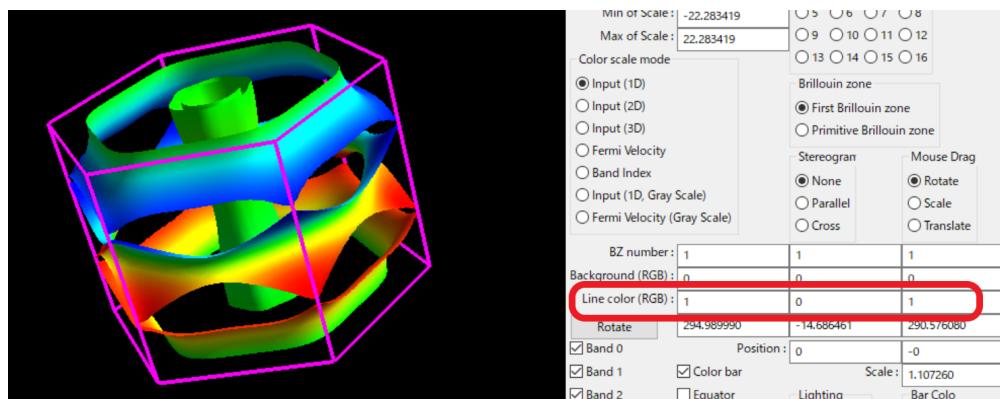

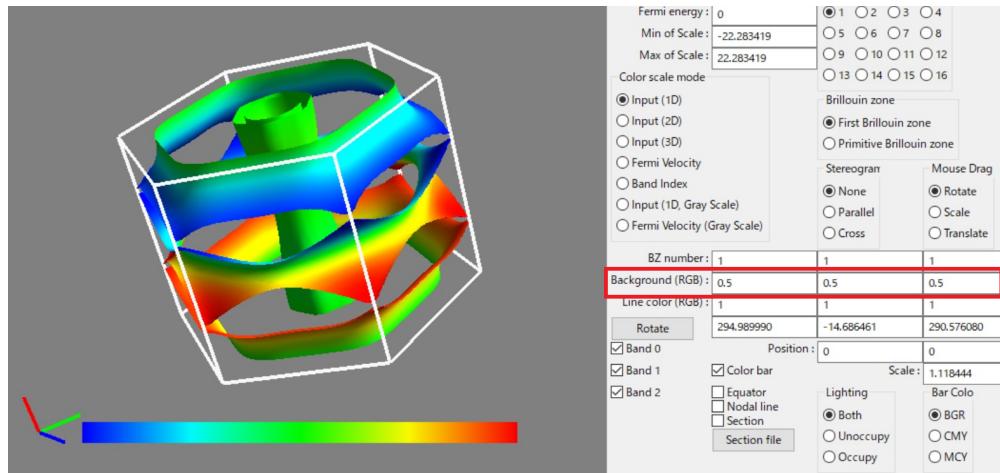

The background color is specified as RGB.

5.3 Line width

Modify the width of the Brillouin-zone boundary, the nodal line, etc.

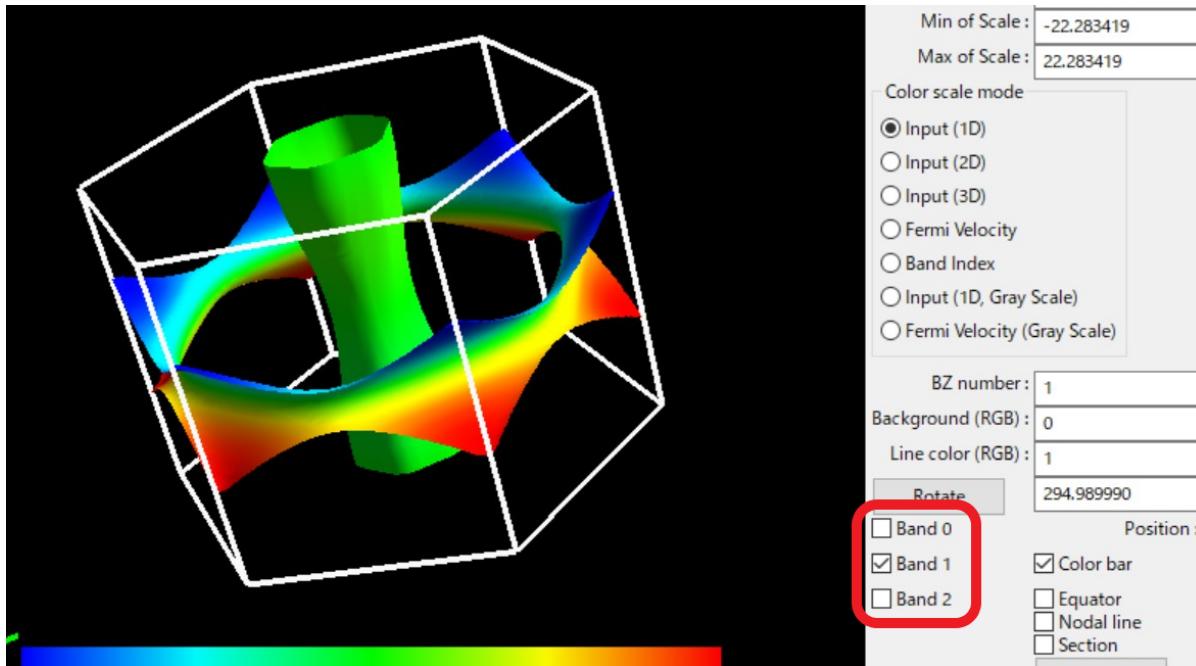

5.4 Line color

The line color is specified with RGB.

5.5 Band

It makes each band enable/disable (Fig. ??).

5.6 Brillouin zone (Update required)

You choose Brillouin-zone type as follows (Fig. 2):

First Brillouin Zone

The region surrounded by Bragg's planes the nearest to Γ point.

Primitive Brillouin Zone

A hexahedron whose corner is the reciprocal lattice point.

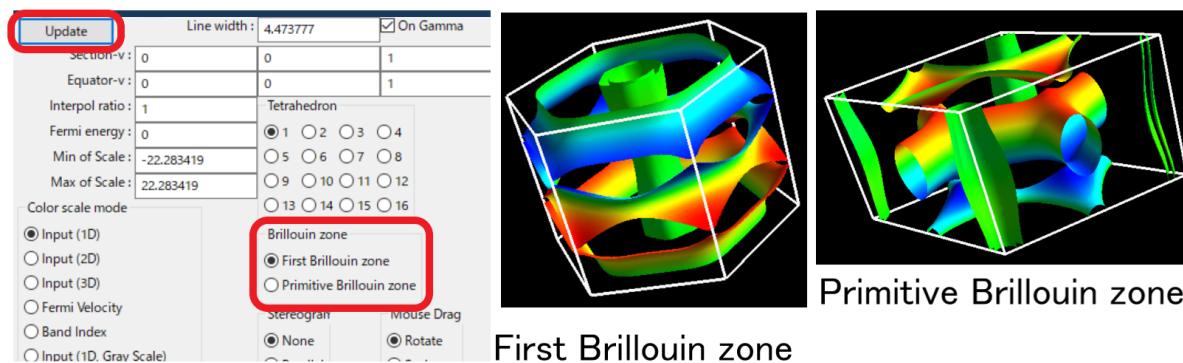

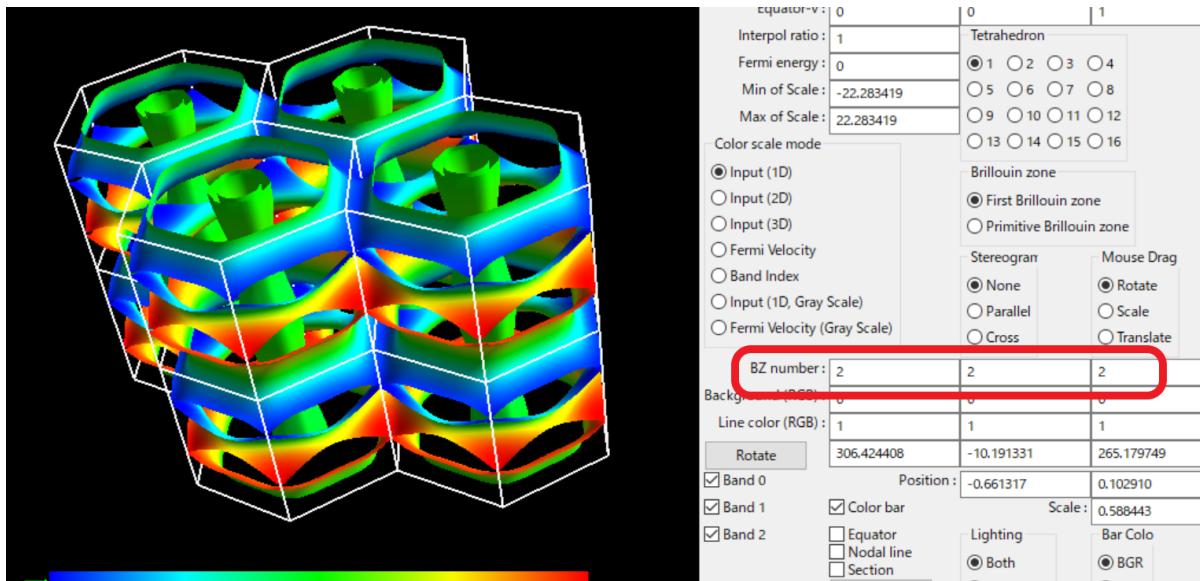

Fig. 2: You can change the type of the Brillouin zone with “Brillouin zone” menu.

5.7 Number of Brillouin zone

We can specify how many zones are displayed along each reciprocal lattice vector.

5.8 Color bar

The color bar becomes enable/disable (Fig. 3).

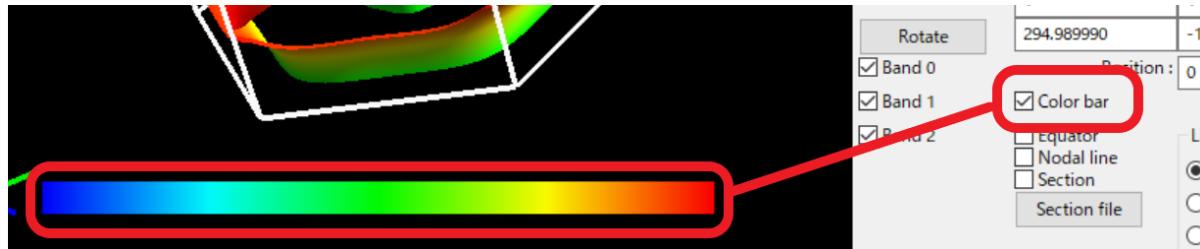

Fig. 3: Toggling the color bar with “Color bar On/Off” menu.

5.9 Color scale mode (Update required)

It turns color pattern on Fermi surfaces (Fig. 4).

Input (1D) (default for the single input quatity) :

It makes blue as the minimum on Fermi surfaces and red as the maximum on them.

Input (2D) (default for the double input quatity) :

The color plot is shown with the color circle (see the figure).

Input (3D) (default for the triple input quatity) :

The input value is shown as arrows on the Fermi surfaces. The color of the Fermi surfaces are the same sa “Band Index” case.

Fermi velocity (default for no input quantity)

Compute the Fermi velocity $\mathbf{v}_F = \nabla_k \epsilon_k$ with the numerical differentiation of the energy, and plot the absolute value of that.

Band Index :

Fermi surfaces of each band are depicted with uni-color without relation to the matrix element.

Input (1D, Gray), Fermi Velocity (Gray) :

Plot with gray scale.

We can change the range of the color plot or the length of arrows for 3D line plot by inputting into the text boxes at “Min of Scale” and “Max of Scale”, respectively.

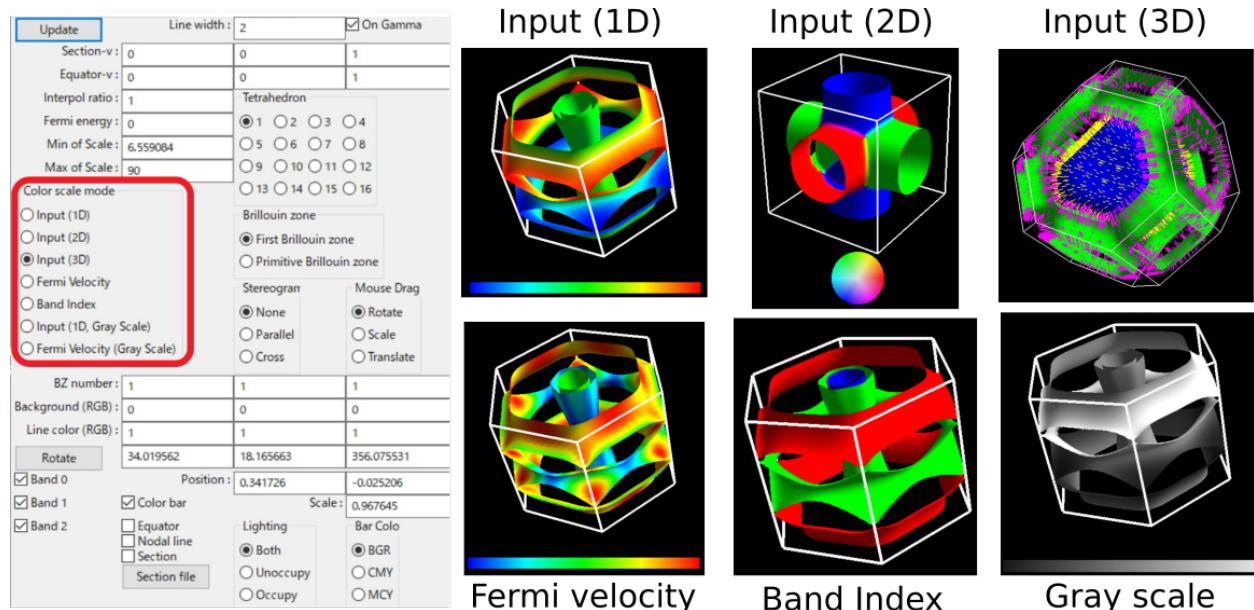

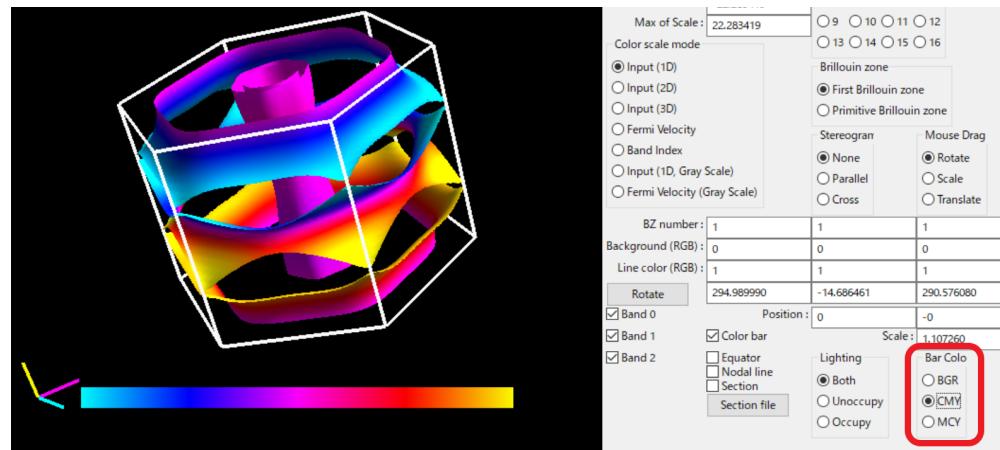

Fig. 4: “Color scale mode” menu.

5.10 Color sequence for plot

We can specify the sequence of color plot. “BGR” is Blue-Cyan-Green-Yellow-Red, “CMY” is Cyan-Blue-Magenta-Red-Yellow, “MCY” is Magenta-Blue-Cyan-Green-Yellow.

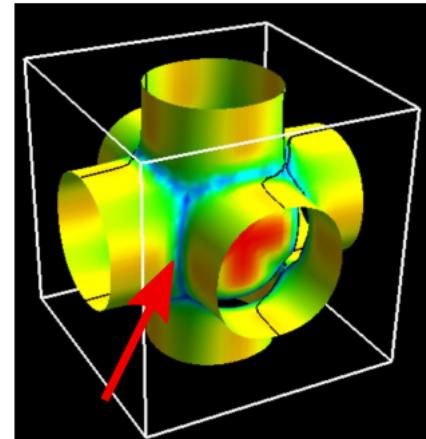

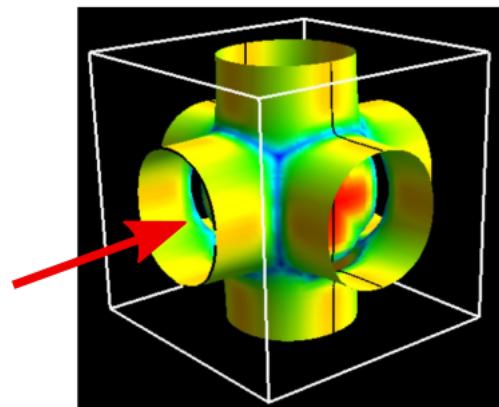

5.11 Equator (Update required)

We can draw the line where $\mathbf{v}_F \cdot \mathbf{k} = 0$ for a vector \mathbf{k} (equator or extremal orbit). See fig. 5. We can toggle equator with the checkbox “Equator” (this operation doed not require the update, and modify the direction of the tangent vector \mathbf{k} by using the textbox at “Equator-v :” (**fractional coordinate**)).

Update	Line width:	3.141042	<input checked="" type="checkbox"/> On Gamma		
Section-v:	1	1	1

	<input type="checkbox"/> Section				<input type="radio"/> Occupy

Equator-v:1 0 0

Equator-v:1 1 0

Fig. 5: Display the equator with the “Equator” menu.

5.12 Interpolation (Update required)

Smooth the Fermi surface with the interpolation (Fig. 6). The time for the plot increases with the interpolation ratio.

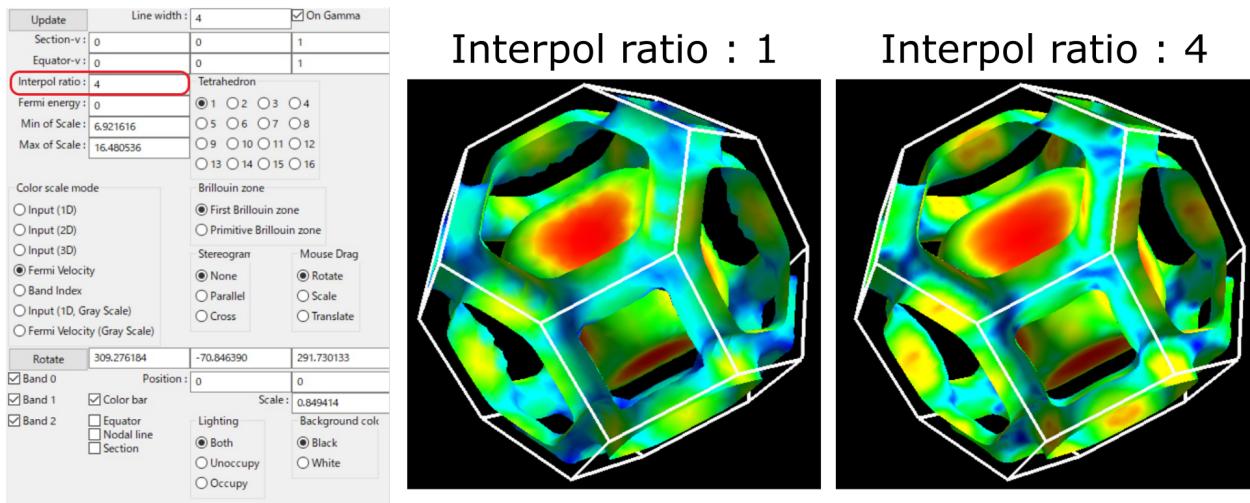

Fig. 6: Modify the number of interpolation points from 1 to 4 with “Interpolate” menu.

5.13 Which (or both) side of Fermi surface is illuminated

We can choose the illuminated side of the Fermi surface (Fig. 7).

Both :

Light both sides.

Unoccupy :

Light unoccupied side.

Occupy :

Light the occupied side.

5.14 Mouse Drag

It turns the event of the mouse-left-drag.

Rotate(default)

Rotate the figure along the mouse drag.

Scale

Expand/shrink the figure in upward/downward drag.

Translate

Translate the figure along the mouse drag.

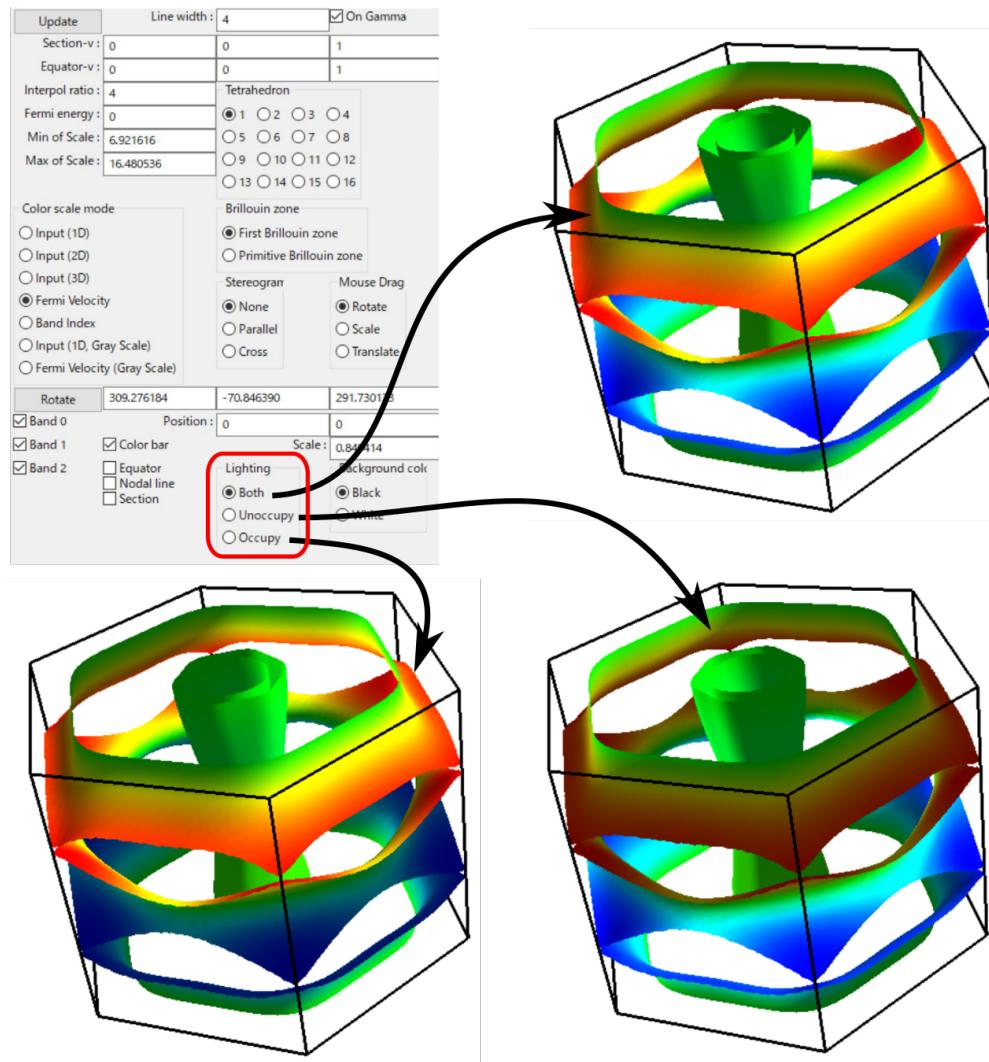

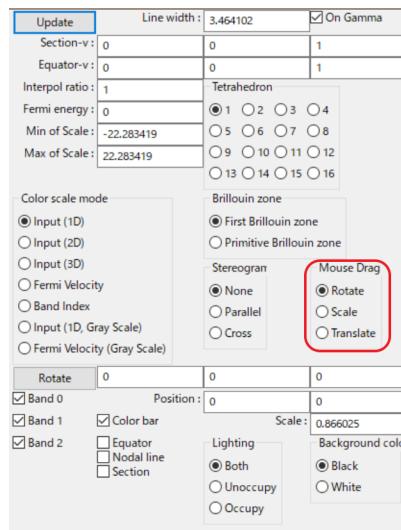

Fig. 7: Change the lighted side by using the “Lighting” menu.

5.15 Nodal line

The line on which the matrix element becomes 0 (we call it nodal line) becomes enable/disable (Fig. 8).

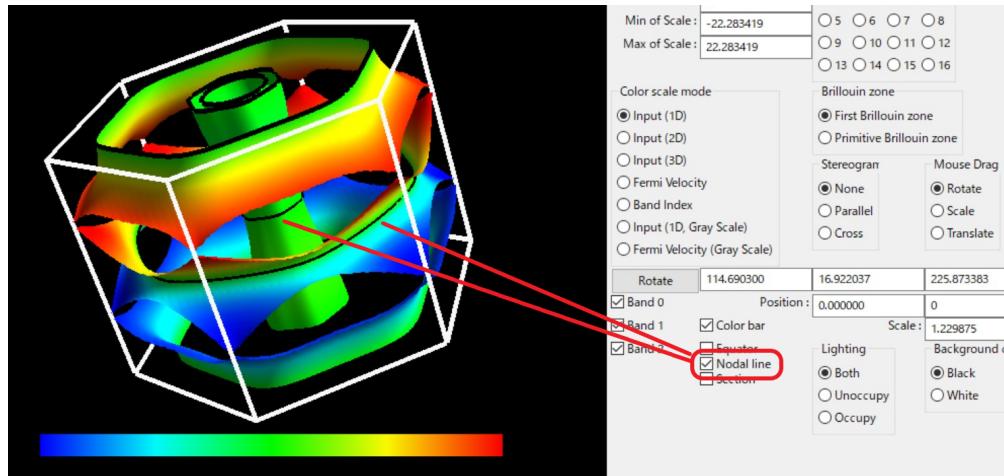

Fig. 8: Toggling the node line with “Nodal line” menu.

5.16 Section of the Brillouine zone (Update required)

Display a 2D plot of the Fermi surface (line) on an arbitrary section of the Brillouin zone (Fig. 9).

We can toggle it with the checkbox “Section” (this operation does not require update), and can change the normal vector with the textbox at “Section-v :” (**fractional coordinate**).

If the checkbox “On Gamma” is turned on, the section crosses Γ point.

5.17 Output section of the Brillouine zone

Above section of the Brillouin zone and Fermi surfaces are outputted into files “fermi_line.dat” and “bz_line.dat” by pushing this button.

These files are plotted in gnuplot as follows:

```
plot "fermi_line.dat" w l, "bz_line.dat" w l
```

5.18 Shift Fermi energy (Update required)

It shifts the Fermi energy (= 0 in default) to arbitrary value (Fig. 10).

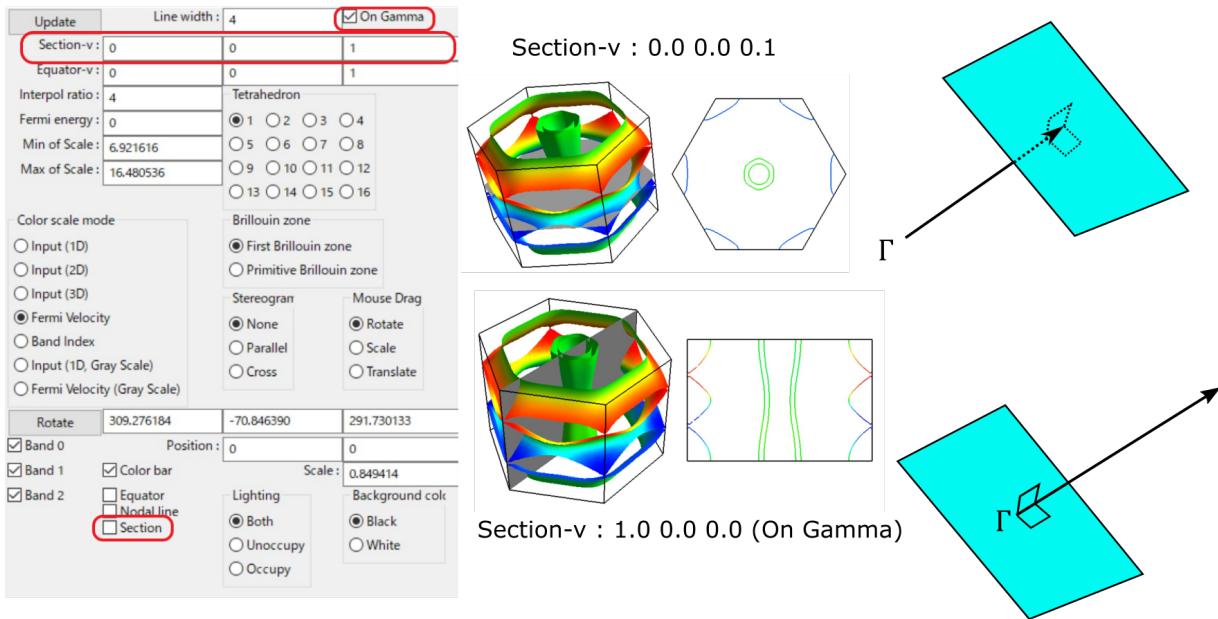

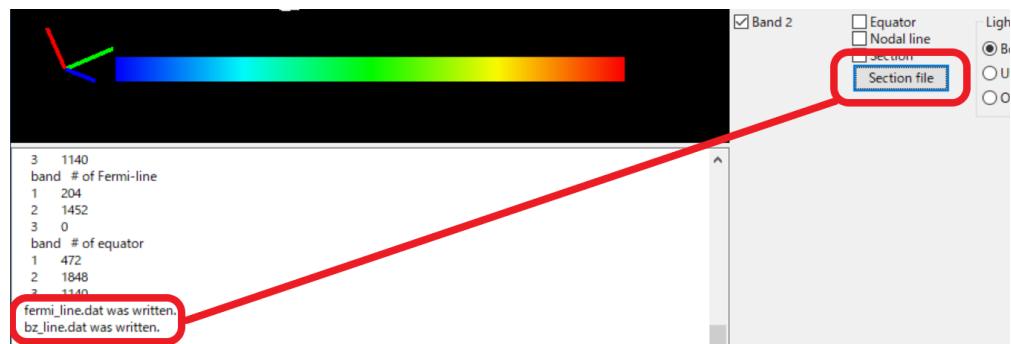

Fig. 9: Display 2D plot of the Fermi surface (line) with “Section” menu.

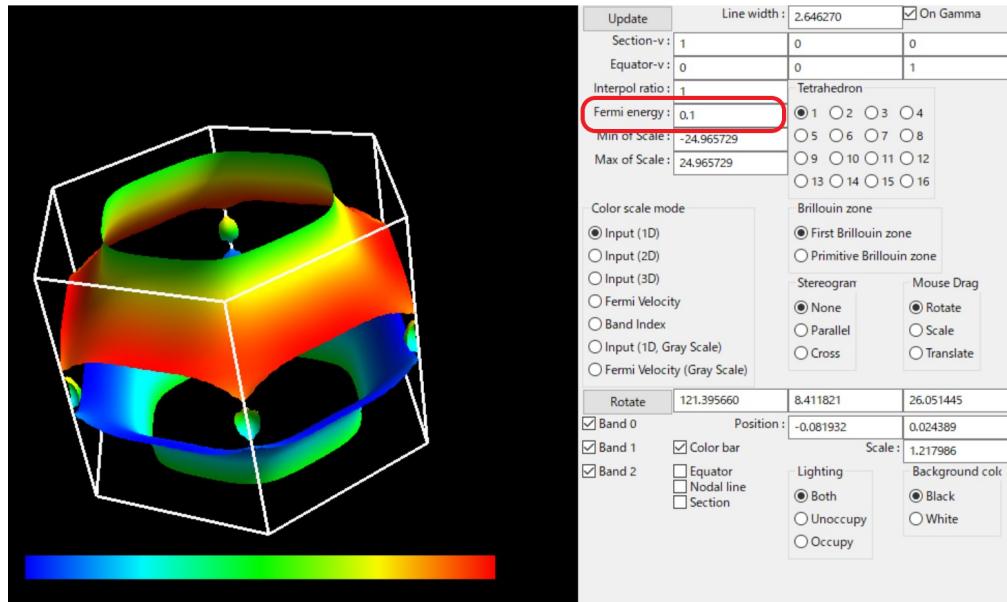

Fig. 10: The Fermi energy is set from 0 Ry to 0.1 Ry with “Shift Fermi energy” menu

5.19 Stereogram

The stereogram (parallel eyes and cross eyes) becomes enabled/disabled (Fig. 11).

None (Default)

Parallel

Parallel-eyes stereogram

Cross

Cross-eyes stereogram

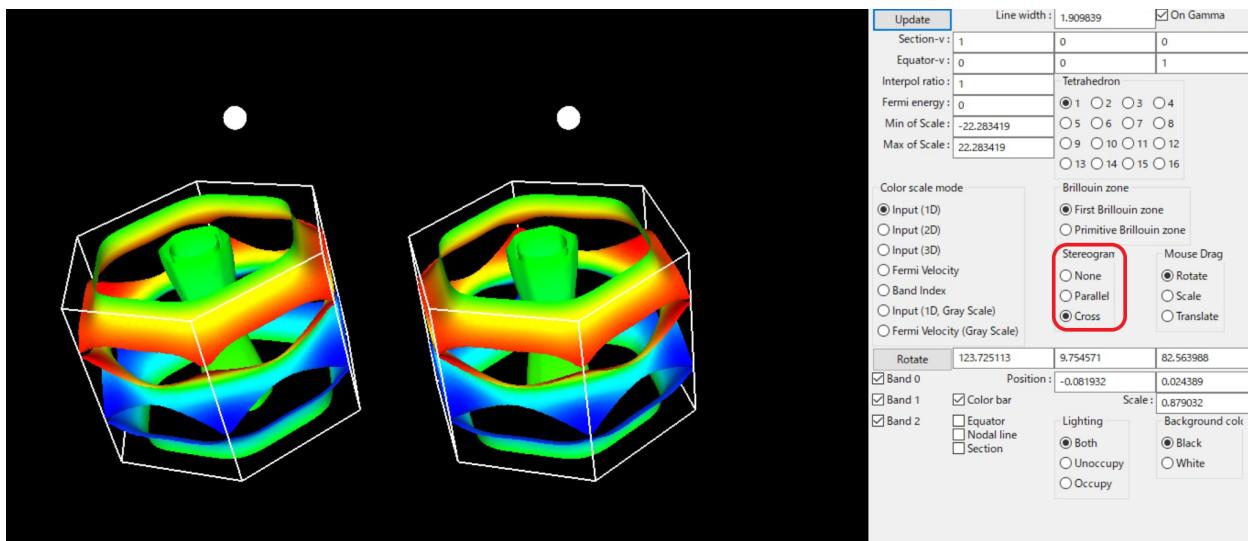

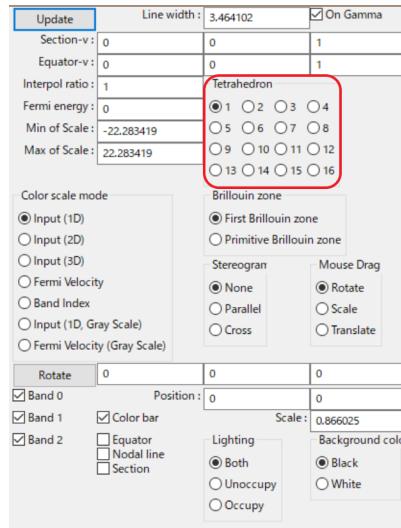

Fig. 11: The stereogram becomes enabled/disabled with “Stereogram” menu.

5.20 Tetrahedron (Update required)

You change the scheme to divide into tetrahedra (`tetra # 1` as default). It is experimental.

5.21 View point

Changing the view point.

Scale

Change the size of the figure.

Position

Change the xy position of the figure.

Rotate

Change angles at x-, y-, z- axis. Rotations are performed as z-y-x axis if the “Roate” buttone is pushed.

In each menu, first the current value is printed. then a prompt to input the new value appears (Fig. 12).

5.22 Saving images

`fermisurfer` does not have any functions to save images to a file. Please use the screenshot on your PC.

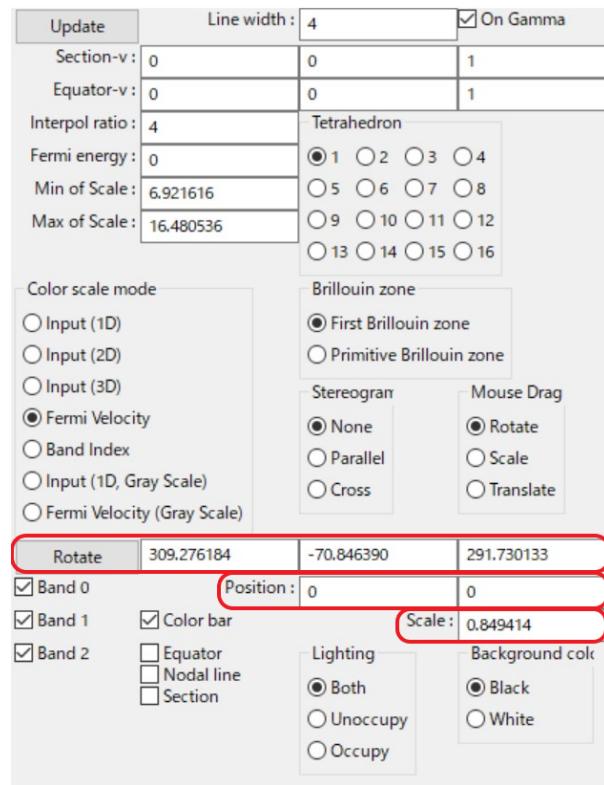

Fig. 12: Modify the view point by using “View point” menu

CHAPTER
SIX

BATCH MODE

By using “Batch mode”, we can generate an image (PNG) file drawn by FermiSurfer only with the command-line operation. By using this batch mode, we can easily make [this kind of many figures](#).

For example, in `example/` directory, when we execute

```
$ fermisurfer mgb2_vfz.frmsf frmsf.in 500 500
```

we will obtain an image file `frmsf.in.png`. The last two numbers are the width and the height of the window. `frmsf.in` is a configuration file for the batch mode; its contents are as follows:

```
backgroundcolor 1 1 0
linecolor 0 0 1
band 0 0 1
#brillouinzone primitive
    colorbar 1
    colorscale fermivelocity
    minmax -22 22
#    equator 1.0 0.0 0.0
    interpol 4
    linewidth 3.0
    lighting both
    nodalline 0
#    section 1.0 0.0 0.0
    acrossgamma 1
    position 0.0 0.0 0.0
    scale 1.0
    rotation 120.0 40.0 0.0
fermienergy 0.0
stereogram none
tetrahedron 1
```

They are corresponding to the operations in the panel written in the previous section, and the available keywords are as follows (for the ignored keyword, each default value is used) :

Key-word	Available parameter	Default value	Description
background	black, white	black	Background color
band	1 or 0 for each band	1 1 1 1 ...	Show(1) or hide(0) each band
brillouin-zone	first, primitive	first	Kind of the Brillouin zone
colorbar	0, 1	1	Show(1) or hide (0) the color bar
colorscale	input1d, input2d, input3d, fermivelocity, bandindex, inputgray, fermivelocitygray	input1d	Kind of the color plot
minmax	float float	The min. and max. through Fermi surfaces	the range of the color scale
equator	float float float	If it is not specified, equator is not shown	Tangent vector for equator (fractional coordinate)
interpol	int	1	Degree of the interpolation
linewidth	float	3.0	Line width
lighting	both, unoccupied, occupied	both	Which side is illuminated
nodalline	0, 1	0	Show(1) or hide(0) the nodal line
section	float float float	Section is not shown	Normal vector for the section (fractional coordinate)
across-gamma	0, 1	1	Whether math: <i>rm Gamma</i> is included (1) or not (0) in the section.
position	float float	0.0, 0.0	The position of the figure
scale	float	1.0	The scale of the figure
rotation	float float float	0.0, 0.0, 0.0	Rotation arround x-, y-, and z-axis
fermienergy	float	0.0	Fermi energy
stereogram	none, parallel, cross	none	Stereogram
tetrahedron	int from 0 to 15	0	Direction to cut tetrahedra

Note: This function uses “import” command to get the screen-shot in ImageMagic. Therefore ImageMagic have to be installed to use this function.

TUTORIAL WITH QUANTUM ESPRESSO

Since the version 6.2, Quantum ESPRESSO can generate data-files for FermiSurfer. The following quantities can be displayed through FermiSurfer.

- The absolute value of the Fermi velocity $|v_F|$ (`fermi_velocity.x`).
- The projection onto each atomic orbital $|\langle \phi_{nlm} | \psi_{nk} \rangle|^2$ (`fermi_proj.x`)

7.1 Building PostProcess tool

For displaying the above quantities with FermiSurfer, we have to build PostProcess tools (tools for plotting the band structure, the charge density, etc.) in QuantumESPRESSO as follows:

```
$ make pp
```

7.2 SCF calculation

Now we will move on the tutorial. First, we perform the electronic-structure calculation with `pw.x`. We will treat MgB₂ in this tutorial. The input file is as follows.

`scf.in`

```
&CONTROL
  calculation = 'scf',
  pseudo_dir = './',
  prefix = 'mgb2' ,
  outdir = './'
/
&SYSTEM

ATOMIC_SPECIES
Mg    24.3050  Mg.pbe-n-kjpaw_psl.0.3.0.upf
B     10.811   B.pbe-n-kjpaw_psl.0.1.upf
ATOMIC_POSITIONS crystal
Mg    0.000000000  0.000000000  0.000000000
B     0.333333333  0.666666667  0.500000000
B     0.666666667  0.333333333  0.500000000
K_POINTS automatic
16 16 12 0 0 0

```

Pseudopotentials used in this example are included in PS Library, and they can be downloaded from the following address:

- http://theosrv1.epfl.ch/uploads/Main/NoBackup/Mg.pbe-n-kjpaw_psl.0.3.0.upf
- http://theosrv1.epfl.ch/uploads/Main/NoBackup/B.pbe-n-kjpaw_psl.0.1.upf

We put the input file and the pseudopotential in the same directory, and run `pw.x` at that directory.

```
$ mpiexec -np 4 pw.x -npool 4 -in scf.in
```

the number of processes and the number of blocks for k -paralleliztion (`npool`) can be arbitlary numbers. We also can perform additional non-scf calcultion with a different k -grid.

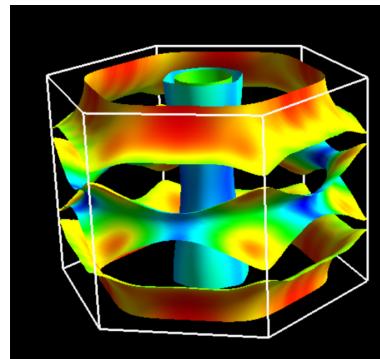

7.3 Compute and display Fermi velocity

We run `fermi_velocity.x` program with the same input file as `pw.x`.

```
$ mpiexec -np 1 fermi_velocity.x -npool 1 -in scf.in
```

For this calculation, the number of blocks for k -paralleliztion (`npool`) should be 1 (or not specified). Then, the file for the Fermi velocity, `vfermi.frmsf`, is generated; this file can be read from FermiSurfer as

```
$ fermisurfer vfermi.frmsf
```

For the case of the collinear spin calculation, two files, `vfermi1.frmsf` and `vfermi2.frmsf` associated to each spin are generated.

7.4 Compute and display projection onto the atomic orbital

Then we will computeb the projection onto the atomic orbital. First we run `projwfc.x` with the following input file: `proj.in`

```
&PROJWFC
 outdir = './'
prefix='mgb2'
Emin=-0.3422,
Emax=10.0578,
DeltaE=0.1
/
2
6 10
```

The input dates after the end of the name-list PROJWFC (/) is not used by `projwfc.x`. The number of processes and the number of blocks for the k -parallelization (`npool`) must to be the same as those for the execution of `pw.x`.

```
$ mpiexec -np 4 projwfc.x -npool 4 -in proj.in
```

excepting `wf_collect=.true.` in the input of `pw.x`.

the following description can be found in the beginning of the standard output of `projwfc.x`.

```
Atomic states used for projection
(read from pseudopotential files):
```

```
state # 1: atom 1 (Mg ), wfc 1 (l=0 m= 1)
state # 2: atom 1 (Mg ), wfc 2 (l=1 m= 1)
state # 3: atom 1 (Mg ), wfc 2 (l=1 m= 2)
state # 4: atom 1 (Mg ), wfc 2 (l=1 m= 3)
state # 5: atom 2 (B ), wfc 1 (l=0 m= 1)
state # 6: atom 2 (B ), wfc 2 (l=1 m= 1)
state # 7: atom 2 (B ), wfc 2 (l=1 m= 2)
state # 8: atom 2 (B ), wfc 2 (l=1 m= 3)
state # 9: atom 3 (B ), wfc 1 (l=0 m= 1)
state # 10: atom 3 (B ), wfc 2 (l=1 m= 1)
state # 11: atom 3 (B ), wfc 2 (l=1 m= 2)
state # 12: atom 3 (B ), wfc 2 (l=1 m= 3)
```

This indicates the relationship between the index of the atomic orbital (`state #`) and its character (for more details, please see `INPUT_PROJWFC.html` in QE). When we choose the projection onto the atomic orbital plotted on the Fermi surface, we use this index. For example, we run `fermi_proj.x` with above `proj.in` as an input file,

```
$ mpiexec -np 1 fermi_proj.x -npool 1 -in proj.in
```

and we obtain the data-file for FermiSurfer, `proj.frmsf`. In this case, after / in `proj.in`

```
2
6 10
```

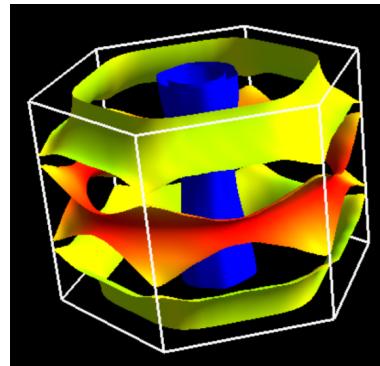

we specify the total number of the displayed projection onto the atomic orbital as the first value (2) and projections to be summed as following indices. In this input, the sum of the 2pz of the first B atom (6) and the 2pz of the first B atom

(10),

$$|\langle \phi_{B_1 2pz} | \psi_{nk} \rangle|^2 + |\langle \phi_{B_2 2pz} | \psi_{nk} \rangle|^2$$

is specified. We can display the Fermi surface as

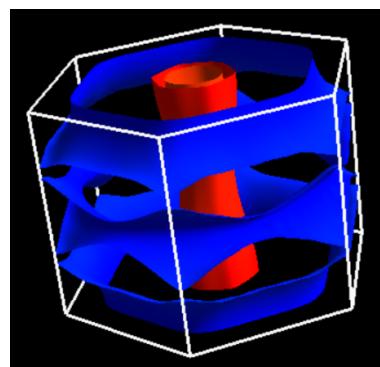

```
$ fermisurfer proj.frmsf
```

If we want to plot the projections onto 2px and 2py orbitals of all B atoms, the input file for `fermi_proj.x` becomes

```
&PROJWFC
outdir = './'
prefix='mgb2'
Emin=-0.3422,
Emax=10.0578,
DeltaE=0.1
/
4
7 8 11 12
```

We do not have to run `projwfc.x` again.

**CHAPTER
EIGHT**

FERMISURFER FOR ANDROID

Functionally limited version of FermiSurfer can be used in Android.

8.1 Install

Download APK file from the following page

<https://osdn.net/projects/fermisurfer/releases/p16366>

then install it.

8.2 Input file

FermiSurfer for Android reads an input file whose name and path are fixed to `/Download/frmsf`. Therefor, we need to change the file name whenever we read each input file. For example, if we download the following file,

http://fermisurfer.osdn.jp/Nb1_Im-3m_151406/Nb4D.frmsf

we need to change the file name from `Nb4D.frmsf` to `frmsf` before we run FermiSurfer app.

8.3 Run

When FermiSurfer app runs, the above input file is read automatically, and Fermi surfaces are displayed. We can do the following operations:

- Rotate objects by swiping.
- Magnify/shrink objects by swiping up/down the edge of the display. Both right and left edges can be used.

FERMISURFER ON WEB

We can use FermiSurfer on Web at the following URL: <https://fermisurfer.osdn.jp/js/index.php>

9.1 Control FermiSurfer on Web

Although we are planning to port all functions of *the app version of Fermisurfer*, part of them have not been supported yet.

9.2 How to input file

Fermi surfaces are displayed by choosing a local FRMSF file (BXSF is not supported yet) through the file-explore at left top of the window. Several time-lag may be expected.

9.3 Open online file

We can open an input file placed online by just clicking the link by a URL with an argument:

<https://fermisurfer.osdn.jp/js/index.php?frmsf=https://fermisurfer.osdn.jp/js/Pb.js>

We add the URL where the input file locates after `https://fermisurfer.osdn.jp/js/index.php?frmsf=`. This function can be used in research-introduction pages.

The input file `Pb.js` is as follows:

```
frmsf="16 16 16 1 2 -0.67303315756516724 0.67303315756516724 ... ";
```

This is a javascript source in which a single-lined string generated by replacing new-line letters in *FRMSF-formatted file* with spaces is inputted into a variable `frmsf`. BXSF format has not been supported.

We can convert a FRMSF-formatted file into the above format as

```
sed -e '1i frmsf="" -e '$a ";" ANY.frmsf | perl -pe 's/\n/ /g' | sed -E -e 's/ +/ /g' -e 's/" /"/g' -e 's/ \"/"/g' > ANY.js
```

The following bash script file also do this conversion

<https://fermisurfer.osdn.jp/js/frmsf2js.sh>

Usage:

```
$ bash frmsf2js.sh ANY.frmsf
```

where ANY is an arbitrary string. Then a file ANY.js which should be uploaded onto an Web server is generated.

**CHAPTER
TEN**

ACKNOWLEDGMENT

I thank Dr. Yusuke Konishi in ISSP; he performed a test in Mac OSX, and proposed Makefiles and a patch.

RE-DISTRIBUTION OF THIS PROGRAM

11.1 Contain Fermisurfer in your program

FermiSurfer is distributed with the [MIT License](#). To summarize this, you can freely modify, copy and paste FermiSurfer to any program such as a private program (in the research group, co-workers, etc.), open-source, free, and commercial software. Also, you can freely choose the license to distribute your program.

11.2 MIT License
